Appendix

Treatment-delivery judgment documentation checklist

The following checklist is proposed as a practical tool for making treatment-delivery judgment explicit and reviewable. It is a proposal for documentation and has not been empirically validated.

- Was the finding within institutional tolerance?
- Did it differ meaningfully from simulation or prior fractions?
- Was patient preparation checked?
- Was repositioning performed?
- Was repeat imaging performed?
- Was escalation required?
- What was the rationale for proceeding or not proceeding?
- Was this a recurrent pattern?
- Should this be discussed in peer review or SOP review?
